About Me

I am an IT that specialized in the area of web development, whether that would be on a back-end or on the front-end. I am a fan of PHP and I have been using it with CodeIgniter framework since 2007 until now. Along with CodeIgniter I am also using programming tools such as MySQL, HTML, CSS, Javascript, jQuery and can understand any third party APIs e.g. Payment Integration, while I am connected in several BPO companies in Manila, Philippines and still using these with my current employer which is F.C Tucker Company, one of the leading real estate company in Indiana, USA. In 2017 while employed in Tucker I started using NodeJs, VueJS, Axios, Postmand. When the new frameworks were launched I chose to study both Laravel and Symfony.

For my project-based website, I used Wordpress for the project that's rushed and needed to be published like two to four weeks. Since WP is limitless whenever you want to do, I can tell that it's easy to used.

Aside from programming, I also love working on computer troubleshooting and networking. Like, replacing hardware, installing of the OS and basic software needed in both laptop and desktop. I have enough knowledge in networking as well, like cabling and crimping, basic IP porting and forwarding.

Work Experience

2015 – Present

F.C. Tucker Company – Indiana, USA

Remote Web Developer

- Assigned to maintain and create new tools the company toolbox that helps our agents/brokers to render flyers and instant materials to be provided in their prospected clients or to be posted in social media sites. *(I can't provide the link since it requires login)*
